infection

The present sequence is Murine Lymph node Stromal cell kinase 1 (MLSK-1). This protein is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumours and bacterial, viral or fungal

Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases,

and

Novel human cancer associated protein encoded within open reading of cancer associated gene, useful as targets for diagnosing cancer

Disclosure; SEQ ID NO 23; 182pp; English.

The invention relates to cancer-associated proteins (CAP) and the cancer-cassociated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an complete the complete them. The invention also relates to a method for treating cancers involving administering to a patient an complete the complete them. The cancer activity in a contential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer complete the complete to the anticancer drug candidate con expression of the CA gene. The CAP proteins are useful for detecting concer associated with expression of a CAP protein in a test cell sample cand for screening for a bioactive agent capable of modulating the concer, involving determining the expression of a CA nucleic acid in a concer, involving determining the expression of a CA nucleic acid in a concer, involving determining the expression of a CA nucleic acid in a concer, involving determining the expression of the invention. Note: The sequence data for this patent did not form part of the printed capable that the complete cancer invention, but was obtained in electronic format directly from WIPO at the wipe int/only/whilehed for expression. ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         맑
The invention relates to an AMPK (AMP-activated protein kinase)-related kinase, designated SNARK polypeptides and polynucleotides. SNARK (SNIF/AMP-activated protein kinase) is involved in stress response to glucose deprivation. The polynucleotides are useful for expressing SNARK protein in isolated form or as a protein conjugate. Activation of SNARK
                                                                                                                                                              AMPK (AMP-activated protein kinase) -related kinase, despolypeptides and polymucleotides, useful for treating diabetes, or other disorders of lipoprotein production increased levels of cholesterol.
                                                                                                                                                                                                                                                                                                                                                                                                          03-AUG-2000; 2000US-0222650P

Activation of SNARK is predicted to have insulin-like effects that would enhance the disposal of glucose into muscle and reduce plasma glucose for the treatment of diabetes and some type of disorders of lipporotein production leading to increased levels of cholesterol or triglycerides. SNARK or its variants may be administered to a subject to treat or prevent a disease associated with decreased expression of SNARK, such as diabetes. SNARK antibodies are used to modulate SNARK activity either in vivo for therapeutic purposes, or in vitro, for drug screening and related investigational purposes. SNARK antagonists may be administered to increase fuel production, decrease glucose uptake and increase levels of blood glucose in a patient suffering from hypoglycaemia. The present sequence is rat SNARK protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                08-JUL-1999; 99JP-00194486.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             吊
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                   This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids having the sequences of clones isolated from libraries different human tissues, useful in recombinant DNA methodologies.
                                                                                                                                                                                                                                                                                                                                                                                   Claim

2002-759812/82.)B; ABZ11333.

New polynucleotides comprising sequences assembled from expressed sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or p coagulation disorders. platelet

Claim 9; SEQ ID NO 1163; 1012pp + Sequence Listing; English

ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polymocleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polymocleotides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's an Alzheimer's disease), autoimmune diseases (multiple sclerosis, platelet or coagulation disorders, wound, burns, incision, ulcers, platelet or coagulation disorders, wound, burns, incision, ulcers, lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences invention relates to de sequence selected from any an isolated polynucleotide (I) comprising 948 sequences (ABZ11119-

CC The present invention relates to the isolation of a novel human protein CC kinase designated 3700, and the polynucleotide sequence encoding it. The CC invention also describes the use of a modulator of the activity of CC protein kinase (PK) 3700 for making a medicament or pharmaceutical CC composition for modulating the ability of a cell to phosphorylate an CC amino acid residue of a substrate protein. Modulators of protein kinase CC 3700 activity are useful for modulating protein phosphorylation, cell CC signalling, tumourigenesis, mitogenesis, transcription of a gene, CC angiogenesis, tissue repair, tissue regeneration, establishment or progression of atherosclerosis, and signalling across the blood-brain CC barrier. The polynucleotide and polypeptide molecules for protein kinase CC 3700 may be used as diagnostic targets and therapeutic agents for CC uring PK-related disorders and cellular proliferative and/or curing PK-related disorders (e.g. haematopoietic neoplastic disorders, CC carcinoma, sarcoma, metastatic disorders or leukaemia). The 3700, to CC detect a genetic alteration in a 3700 gene, in chromosome mapping, for CC tissue typing, in forensic biology, and as surrogate markers. The present CC sequence represents human protein kinase 3700.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁

```
and transmembrane proteins. Extracellular proteins play immourtant roles or in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, or differentiation) is typically governed by information or received from other cells and the immediate environment. The information or is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, common tides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the cDNA sequences encoding them. The novel cuseful for the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be cuseful for measuring or detecting the expression of a tumour associated gene. The present convention is the amino acid sequence of a human PRO protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                          This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polypeptide sequence is a full length human protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to human Adenosine Monophosphate activated Protein Kinase (AMPK)-related kinase 5 (ARK5/ KIAA0537) and its coding sequence, which are useful for imparting stress resistance to cells. ARK5 is useful for treatment and prevention of tumours, nervous disorders, muscle disorders and ataxia teleangiectasia. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Agent for imparting stress resistance to cells, comprises DNA for adenosine monophosphate activated protein kinase-related treatment of tumors, muscle and nervous disorders, and ataxia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Esumi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example

```
The invention describes an isolated 21910, 56634, 5503, 2504, 15977, CC 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, CC 21967, h1993, m1983, 38555 or 593 nucleic acid molecule (I) comprising CC any one of 40 nucleotide sequences (I). The nucleic acid molecules and cc disorder, or a subject at risk of developing a disorder, which is CC associated with aberrant 21910, 56634, 5503, 2504, 15977, 14760, 25501, CC 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, CC m1983, 38555 or 593 activity, such as cellular proliferative and/or CC differentiative disorders, brain disorders, platelet disorders, brain disorders, lung disorders, covarian disorders, prostate disorders, cervical disorders, spleen CC disorders, thymus disorders, thyroid disorders, testes disorders, skin (dermal) disorders, pancreatic disorders, skeletal muscle disorders, candiovascular disorders, gain CC immune, e.g. inflammatory disorders associated with bone metabolism, CC disorders, erythroid disorders, cardiovascular disorders, pain CC disorders (all claimed), e.g. cancer, heart failure, hypertension, cc disorders (all claimed), e.g. cancer, heart failure, hypertension, cc angina, osteoarthritis, rheumatoid arthritis, multiple sclerosis, Crohn's CC disorders are also useful as modulating agents in regulating a variety of cellular process, e.g. cell proliferation, differentiation, growth and cc invention Note: The semences of or in the specific also of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecules and proteins, useful for treating, e.g. cancer, heart failure and angina.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kapeller-Libermann R, F
